

— AI WORKSPACE FOR FRACTIONAL CFOs

Six clients. One workspace. *Zero crossed wires.*

Kairos remembers every client engagement, drafts your board packs, and queues every send for your sign-off. With an exportable audit log for every engagement-end review.

PER-CLIENT MEMORY

APPROVE EVERY SEND

EXPORTABLE AUDIT LOG

— 01 — THE PROBLEM

Fractional CFOs juggle *4–8 clients* in parallel.

Their #1 fear is the cross-client send disaster — Client A's runway numbers ending up in Client B's inbox.

Generic AI tools blur memory across contexts, send without supervision, and leave no record an engagement-end review can use.

Fractional CFOs first. Not consumers. Not engineers. Not (yet) M&A.

01 · ACV

\$2.4–4.8k

PER SEAT / YR

Solo \$199 · Practice \$399 · Setup \$1,500.

02 · REACH

LinkedIn · CFO Connect · r/fractionalCFO ·
Pilot & Paro alumni networks. Public,
accessible without a procurement loop.

03 · FIT

Buyer fear maps perfectly to product: per-
client isolation + approval gate + exportable
log.

Three primitives the buyer actually cares about.

01 **Per-client workspaces.**

One space per engagement. Meeting notes, variance commentary, board updates — kept in client-scoped markdown the assistant reads from but never crosses.

02 **Approve every send.**

Every outbound action pauses in a queue with a 5-minute countdown. Defaults are conservative. Nothing reaches your client until you tap approve.

03 **Exportable audit log.**

Every tool call, every approval, every send → JSONL. Exportable to PDF for any engagement-end review.

The defensible layers are *not* the LLM.

DEFENSIBLE

- Approval gate on persisted LangGraph interrupts — survives restarts; any channel can resolve.
- Markdown-as-source-of-truth — no vector DB lock-in. Diffable, hand-editable.
- Wikilink graph + lint — navigation and integrity in one.
- Multi-channel queue — same DB visible from web, CLI, future surfaces.

COMMODITY

LangChain · Gemini · FastAPI · React · SQLite · Vite · Typer. Replaceable layers. The product still works if any one of them changes.

The moat is the choreography, not the components.

\$240M TAM. Solo target: \$30–80k MRR.

~50k

Loom recorded · 30 cold emails / week

WKS 5–8

First pilots

3 logos at \$1,500 setup + \$399/mo

WKS 9–13

Scale

Public pricing · LinkedIn cadence · 60 emails / week

One head. Operator + designer + engineer.

- Built and shipped Kairos solo over 6 months from a deep research dossier.
- Cockpit visual quality is uncommon for B2B SaaS at this stage. It converts trial-to-paid intent.
- Lifestyle-business shape is intentional, not a fallback.
- No fundraising required for the CFO wedge.

— 08 — THE ASK

Not raising. *Open to the right strategic conversation.*

Acquirers tucking into a CFO-vertical SaaS · strategic partners co-building or co-selling · distribution partners with the right buyer.
